DEFORESTATION

- Deforestation is the clearing of forests by cutting down trees, and transforming land for alternative uses such as agriculture, urbanization, or mining. This results in a loss of forest cover and the degradation of ecosystems, with negative impacts on biodiversity, carbon storage, and local communities that depend on forests for their livelihoods. Deforestation also contributes to climate change through the release of greenhouse gases that were previously absorbed by the trees.

Edit with WPS Office

OBJECTIVES:

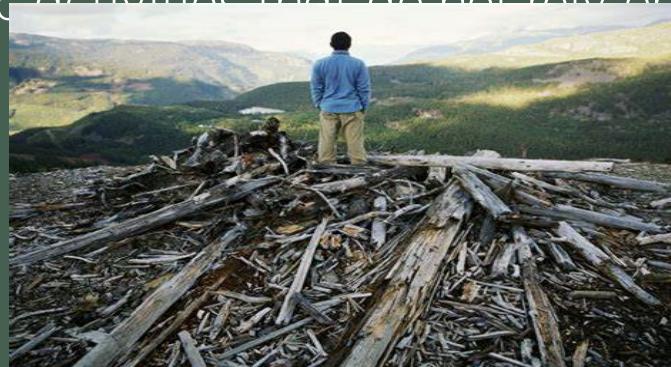

- The objectives of deforestation vary and can include:
 1. Agricultural expansion: Clearing forests for the purpose of creating new farmland for crops or livestock.
 2. Timber extraction: Cutting down trees for commercial timber production.
 3. Urbanization: Clearing forests for the construction of cities, towns, and roads.
 4. Infrastructure development: Clearing forests for the construction of dams, mines, and other infrastructure projects.
 5. Fuel production: Clearing forests for the production of charcoal and other fuels.

INTRODUCTION:

Deforestation refers to the clearing of forests and the conversion of forested land to other land uses, typically for agricultural or urban development. This process has significant impacts on the environment and the people who depend on forests for their livelihoods. The loss of forests can result in soil erosion, reduced water quality, decreased biodiversity, and increased greenhouse gas emissions. It can also disrupt the livelihoods of local communities that rely on forests for food, medicine, and other resources. Deforestation is a global issue, affecting forests all over the world, and it is one of the major drivers of climate change. Addressing deforestation requires a multi-faceted approach, including better land-use planning, sustainable forest management, and the development of alternative economic activities that do not rely on the destruction of forests.

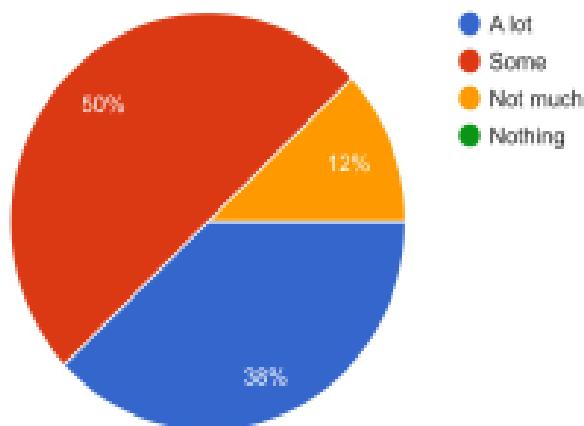

Edit with WPS Office

1. How much do you know about deforestation and its impact on the environment

50 responses

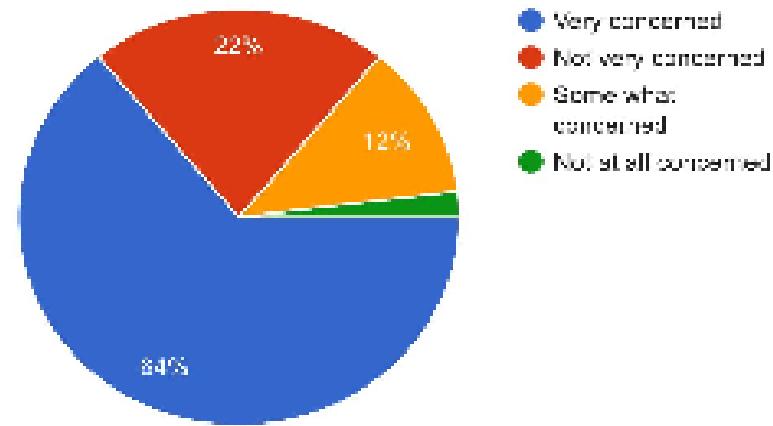

Copy

2. How concerned are about deforestation and its effects on the environment

50 responses

Copy

1.) In this question I've asked about how much does people are well aware about deforestation and it's impact and for that most of them (nearly 50 percent) responded as they already have some knowledge regarding deforestation's impact on our environment

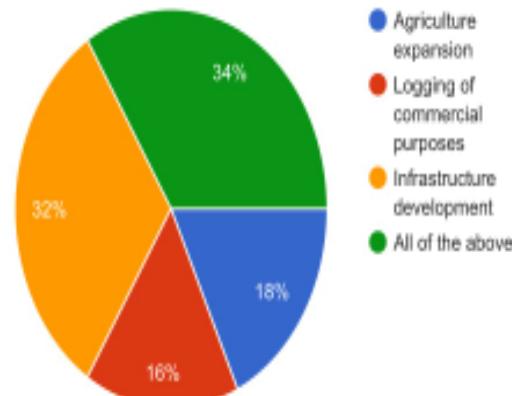

2.) In the above question I've asked how many of them are more concerned about deforestation and it's effect and for that most of them have responded (nearly around 64 percent) that they are so concerned about it's harmful effect on our environment

Edit with WPS Office

3. In your opinion , what are the main causes of deforestation

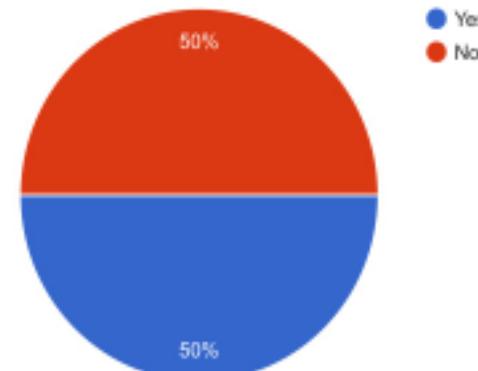

50 responses

Copy

4. Have you ever taken any actions to reduce deforestation or its impact on the environment

50 responses

Copy

3)In the third question I've asked what are the main causes of deforestation and for that majority of the responses says all the above i.e. agriculture expansion ,logging of commercial purposes and infrastructure development

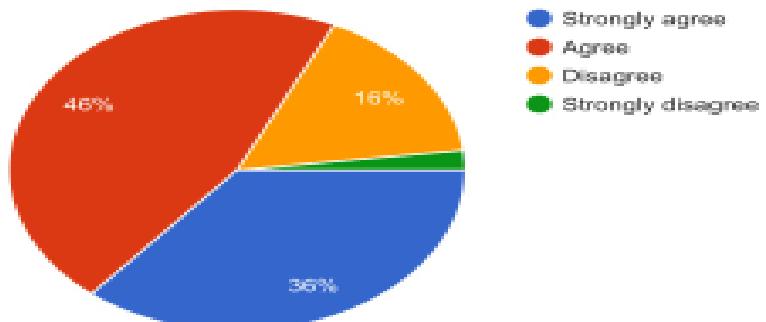

4)In the fourth question I've asked have anyone took any actions that would reduce the amount of trees getting cut them have took actions that would prevent deforestation. The sad part is the other 50 percent haven't even took any actions regarding deforestation even though they know about it's impact

Edit with WPS Office

5. Do you believe individual can play a role in reducing deforestation and its effects?

50 responses

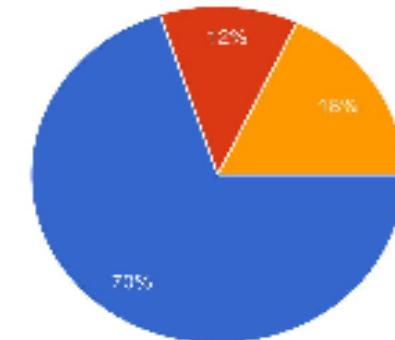

Copy

6. How do you think deforestation affects wildlife and biodiversity

50 responses

Copy

- Negative impact
- No impact
- Positive impact

5)In this question I've asked a question that goes like "can you believe that a individual can play a role in reducing deforestation and its effects " and for that most of them have agreed (nearly 46 percent) and it shows that these individuals have the capacity to make this world a better place to live

6)In the above survey question, we asked how deforestation affects wildlife and bio diversity and for this question nearly 70 percent of survey answers that it would bring a negative impact on to this environment

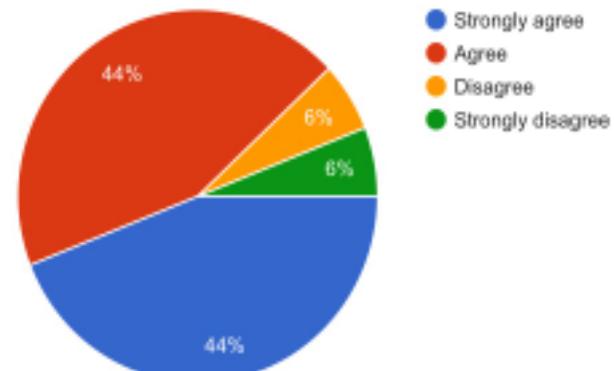

Edit with WPS Office

7. Do you think that companies and government should do more to prevent deforestation ?

50 responses

Copy

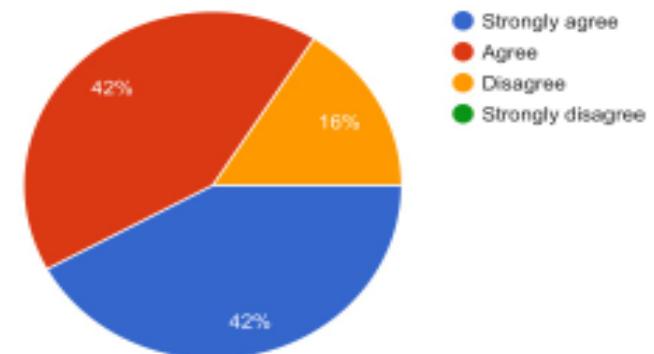

7)Here i have asked does companies and government should take more preventive steps to stop deforestation and for this nearly 44 percent of them have strongly agreed and another 44 percent of them have agreed that both government and private organisations should take actions to prevent deforestation

8. Do you believe that deforestation should be priority issue for international organisation and government ?

50 responses

Copy

8)In the above question i've asked does preventing deforestation should be the first part of priority for international organisations and government and the responses have both strongly agreed and agreed (42-42 percent) that prevention of deforestation should be the first priority of organisations and government

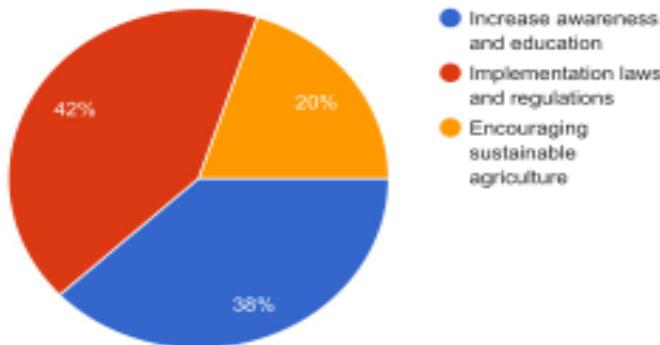

Edit with WPS Office

9. What do you think are the most effective way to reduce deforestation and its impact on the environment

Copy

50 responses

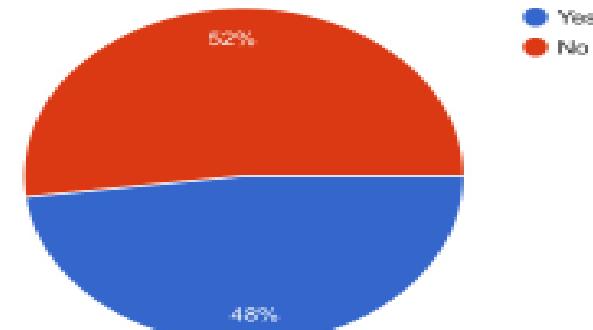

9)In this 9th survey question I've asked some effective ways to reduce deforestation and its impact and majority of them (42 percent) have chosen to implement laws and regulations that would stop deforestation.

10. Do you think that media coverage of deforestation is adequate ?

Copy

50 responses

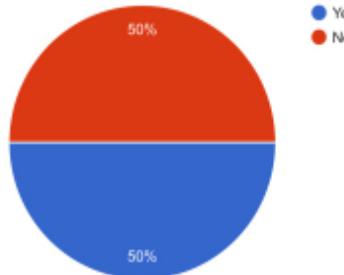

10)In this question I've asked does media even covers or do they even have any concerns regarding deforestation and it's negative impact and for that nearly 52 percent of people have chosen "no" which is quite a harsh truth to be digested.

Edit with WPS Office

11. Have you ever supported a campaign , Organisation or initiatives that aim to stop deforestation or its impact on the environment

50 responses

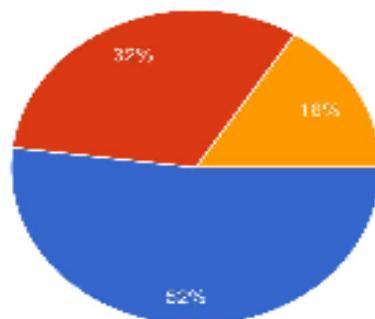

[Copy](#)

In this above question I've asked have you ever supported campaigns or organisations to stop deforestation and for that half of them said Yes and another half responded with No

12. How do you think deforestation affects local communities and indigenous people

50 responses

[Copy](#)

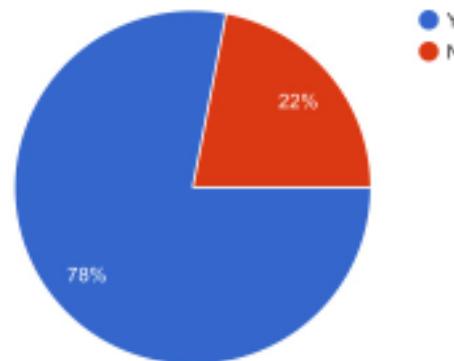

In this above question I've asked does it affects local communities and indigenous people and for this 52 percent of them have replied that it would cause negative impact

Edit with WPS Office

13. Have you ever specifically bought product that are labelled as being eco friendly (or) sustainably source?

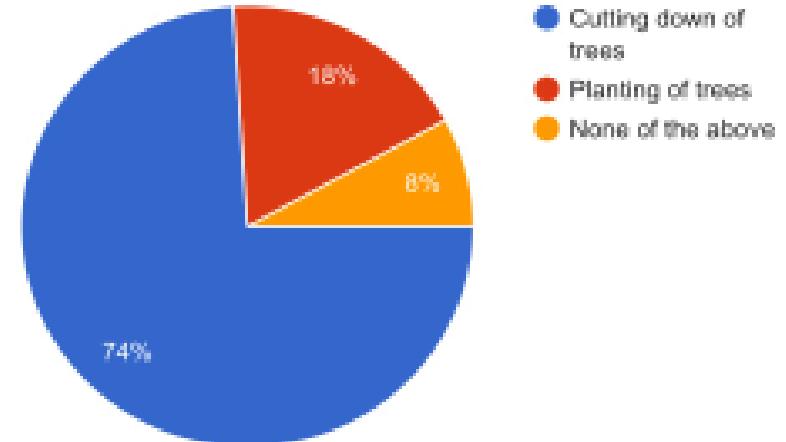

50 responses

Copy

14. Deforestation means

50 responses

Copy

In the above question I've asked how many of them have bought eco friendly bio products and for this survey question majority of them said Yes,

In the above question i've asked what is deforestation and majority of the responses are damn related to our given option.(Nearly 74 percent have said deforestation means cutting down of trees).

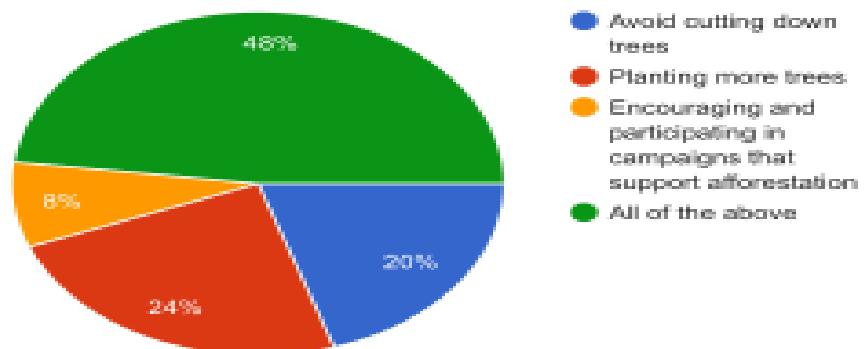

Edit with WPS Office

15. In which way we can contribute a lot regarding the topic?

Copy

50 responses

In the above question I've asked in what ways we can contribute and everyone said all of the above .

Edit with WPS Office

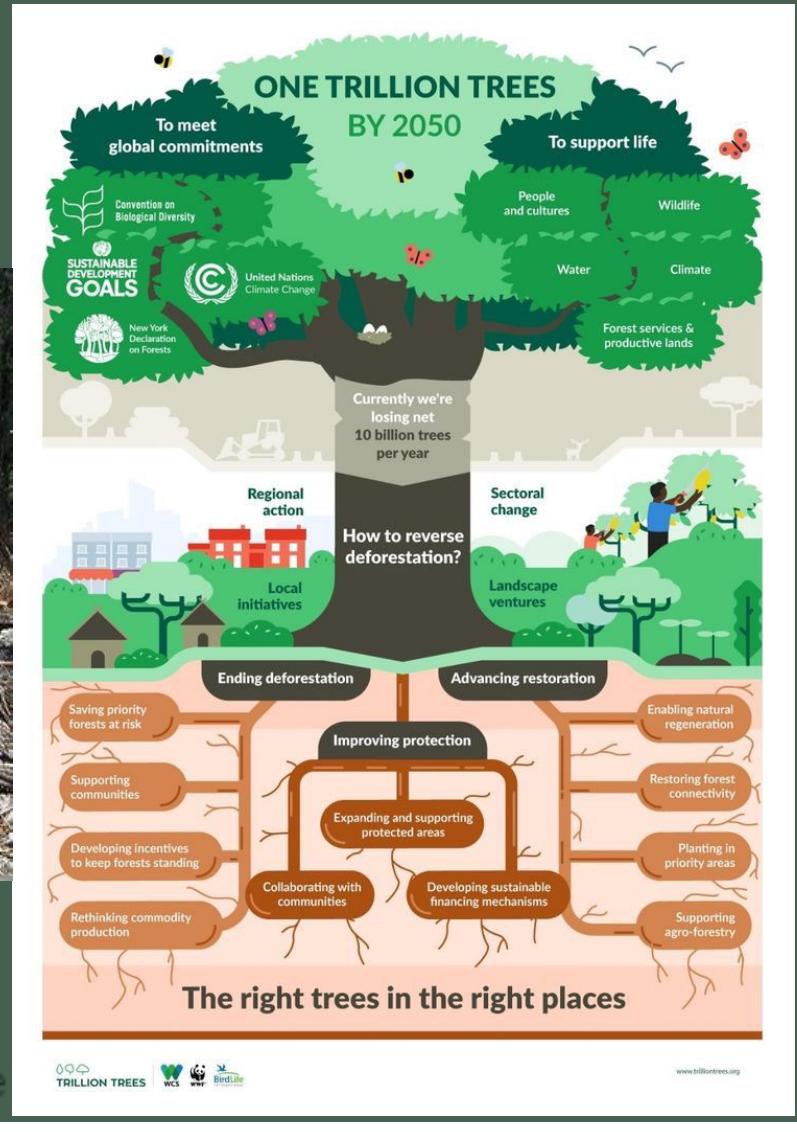

CONCLUSION

- In conclusion, deforestation has far-reaching and long-lasting effects that harm both the environment and human communities. Some of the major impacts of deforestation include:
 - 1.Biodiversity loss: Deforestation destroys habitats and reduces the number of species that can survive in an area, leading to a decline in biodiversity.
 - 2.Climate change: Trees absorb carbon dioxide from the atmosphere, so when they are cut down, carbon is released into the air, contributing to global warming.
 - 3.Soil erosion and degradation: Trees help to hold soil in place and prevent erosion, so when forests are cleared, the soil can become depleted and less productive.
 - 4.Disruption of water cycles: Trees play a crucial role in regulating water cycles, and deforestation can result in changes to the amount and timing of water availability.
 - 5.Social consequences: Deforestation often results in the displacement of indigenous communities and can lead to a decline in the availability of forest products and reduced economic opportunities.
- To address these impacts, it is important to reduce deforestation and promote reforestation, as well as to implement sustainable forest management practices that balance economic, social, and environmental considerations.
